Delivering Decision Critical Data™

Position Title: Senior Q/A Engineer

Company Overview

Ironhawk Technologies' (www.ironhawk.com) mission is to Deliver Decision Critical Data™ throughout the last tactical mile to the *tip of the sword* over narrow band satellite communication networks. Our advanced Java-based digital data management solutions are sold not only to the government, but also to intelligence-based and commercial organizations.

In this environment, we enable distributed and mobile organizations to share, synchronize and retrieve information across multiple platforms, databases, and networks. We accomplish these objectives by creating technology platforms, applications and services that improve the performance of our military communications and save lives in the operating theater.

Position Responsibilities

Ironhawk has an immediate need for talented Quality Assurance engineers for whom working in a highly technical environment in second nature. In particular, we are looking for full-time, experienced senior QA engineers with experience bringing complex development projects through rigorous testing processes in order to uncover defects in a multi-tier, Java-based environment. The ideal candidate will be a self-starter with experience in authoring test plans and test cases, including; starting from systems and software requirements specifications, developing automated scripts, providing both black and white box testing, and performing end-to-end functionality testing. The successful candidate will interact with our QA manager, Java developers, and clients.

Position Requirements

- 5+ years of quality assurance experience.
- Uses meticulous attention to detail to ensure software functionality meets client specs.
- Solid analytical and problem solving skill, including the ability to identify solutions to defects.
- Experience in black and white box testing for multi-tier Java-based applications, in stress/load system testing, and in regression testing and traceability disciplines.
- Ability to rigorously analyze requirements to infer edge conditions, sneak paths for failure or degradation, unintended side-effects, and the effects of random coincidences of conditions.
- Hands-on installation and configuration of O/S, Java EE web servers, and leading databases.
- First-hand knowledge of industry standard QC processes and procedures.
- Strong writing skills to enable the detailing of test plans, test cases, and auditable test-result histories.
- Ability to work closely and in mutual support with Java development teams and to work and communicate within a highly technical culture.
- Familiarity with various bug tracking, reporting, and continuous integration tools.
- US Citizenship.

Employment Opportunity: Senior Q/A Engineer
